

1. rejected sheets shown still in staff labour and progress. rejected daily sheets should not be visible with active ones as same right because no use , search and follow other system standards .

2. job scenarios labour , staff , technicians should be picked up from existing staff . we have a technicians master form but what should happen is we should have a place to add employees as users to this system and giving them roles . check before we already satisfied that .

The screenshot shows a web form titled "Create New Job Order" with a subtitle "Open a service, repair, PDI, warranty, or inspection job." and a "Close" button. The form contains several input fields: "Equipment unit" (with a search placeholder), "Customer" (with a "Select..." dropdown), "Job type" (with a "Service" dropdown), "Responsible officer / supervisor" (with a "Supervisor or service advisor" dropdown), and "Customer requirement" (a text area). A hand-drawn black circle highlights the "Customer" and "Responsible officer / supervisor" fields. Below these fields is a "More intake details" link and a "Create Job Order" button.

3. If we add wrong or miss anything to add in as service intervals, next service date , next repair date we cannot add in Equipment Units .

4.The job sheet form lacks the standard modal dialog for creation in other job related forms .also with Hours

0.00 rate 20 billing 25 for two hours and approved but still shows aproved labour costs 0.00 . pending approval cost 20.00 and Approved Billable Labor 20.00. even approved still shows submitted .

Add Labor Entry

New labor entries are saved as Draft. Use the row actions below to Submit the entry, then Approve it. Warranty or contract coverage can reduce approved labor billing to zero even when the technician entry is marked billable.

Labor Entries
