

Service Job Section Full Testing Document

Date prepared: 2026-06-03

This document is the full manual testing guide for the neuedge Service Job section. It covers service jobs, equipment units, command center, dispatch board, technician workbench, daily sheets, staff/labour, progress, job sheets/work orders, materials, material returns, damage/rejection handling, IOUs, petty cash, out-of-pocket claims, accounts, estimates, service taken, manual invoice creation, final invoices, costs, closeout, files, and audit checks.

Use this document when the Service module must be proven accurate before release or customer demonstration.

1. Testing Rules

- Test from the UI first. Use the database only to confirm values when a UI page does not expose the full detail.
- Use one test job from start to closeout unless the step explicitly says to create another job.
- Record the job number, daily sheet number, MRN number, IOU number, claim number, quotation number, handover number, and invoice number as soon as they are created.
- Every created document must remain visible after save, refresh, logout/login, and navigation away/back.
- No transaction should disappear from the user after requesting or submitting it.
- Draft records must not update stock, cash, AR, AP, or job closeout as final transactions.
- Posted, approved, released, settled, invoiced, or closed records must update the related status and totals.
- If a validation error occurs, the message must clearly tell the tester what is missing or wrong.

2. Roles To Test

Role	Main responsibility	Required checks
Admin	Full test execution and user access	Can access all required menus and recover/reopen where allowed
Service	Job creation, execution, daily sheets, materials, progress, service taken	Can operate service job workflow without finance-only actions

Role	Main responsibility	Required checks
Inventory	MRN posting, stock, returns, damage/rejection visibility	Can verify stock effects and material issue/return behavior
Finance	IOU approval/release/settlement, petty cash, claims, invoices, AR, accounts	Can approve and settle finance documents
Sales	Customer-facing invoice and credit checks where applicable	Can view invoice/AR impact where allowed
Reporting	KPI, stock, costing, and service reports	Can confirm final values in reports

Minimum role test:

Test	Expected result
Service user opens Service -> Jobs	Allowed
Service user opens Finance -> Petty Cash IOUs	Allowed for job-linked IOU status/operation if configured
Inventory user opens MRN/detail	Allowed
Finance user approves/settles IOU and claims	Allowed
Unauthorized user opens admin-only page	Blocked or redirected

3. Environment Health Check

Run these before deep testing.

Check	Where	Expected result
Frontend	<code>http://127.0.0.1:3000/login</code>	Login page loads without CSS or JS 500 errors
API	<code>/api/auth/capabilities</code> through frontend	Returns 200 when app is healthy
Login	Admin credentials	Login succeeds
Sidebar	Service menu	Service menus appear, including Help inside Service section

Check	Where	Expected result
Help page	Service -> Help	Rendered manual loads with screenshots
Static assets	Browser console	No failed _next/static CSS/JS assets
Browser console	Any service page	No repeated application errors

If CSS or JS assets return 500, rebuild and restart the frontend before continuing.

4. Test Data

Use stable test data so expected stock, cash, and account values can be verified.

4.1 Master Data

Data type	Code/name	Required values
Customer	CUS-SVC-001	Service test customer
Supplier	SUP-SVC-001	Spare parts supplier
Warehouse	MAIN	Main stock warehouse
Warehouse bin	MAIN-A1	Active bin under MAIN if bins are enabled
Item category	SPARES	Spare parts
Item category	SUNDRIES	Grease, lubricants, consumables, small shop supplies
Item	SKU-CORE	Stock item, category SPARES , average cost 5.00
Item	SKU-SERIAL	Serialized stock item, category SPARES , average cost 25.00
Item	SUN-GREASE	Stock or non-stock item, category SUNDRIES , unit price/cost as configured
Item	LAB-SVC	Labour/service item if invoice labour uses item selection
Tax	ZERO	0% tax for simple calculation
Petty cash fund	WORKSHOP	Active, enough balance for advances and settlements

Data type	Code/name	Required values
Payment type	Cash	Active
Payment type	Bank Transfer	Active
Technician	TECH1	Cost rate 10.00 , billing rate 25.00

4.2 Opening Stock Required

Create or confirm stock before testing service material issue.

Item	Warehouse/bin	Qty	Serial	Unit cost
SKU-CORE	MAIN / MAIN-A1	10	blank	5.00
SKU-SERIAL	MAIN / MAIN-A1	2	SER-SVC-001 , SER-SVC-002	25.00
SUN-GREASE	MAIN / MAIN-A1	5	blank	as configured

Expected starting stock:

Check	Expected result
Inventory -> On Hand , SKU-CORE	MAIN has 10
Inventory -> Availability , SER-SVC-001	Available
Inventory -> Availability , SER-SVC-002	Available
Inventory -> On Hand , SUN-GREASE	MAIN has at least 5 if stocked

5. Test Run Control Sheet

Fill this during testing.

Document	Number / ID	Status at end	Notes
Equipment unit		Active	
Service job		Closed or Reopened	
Daily sheet		Approved	
MRN		Posted	

Document	Number / ID	Status at end	Notes
Material return		Posted	
Damage/rejection record		Posted	
IOU		Settled / Rejected / Cancelled	
Petty cash voucher		Settled	
Out-of-pocket claim		Settled	
Job sheet / work order		Done	
Labour entry		Approved	
Quotation		Approved or skipped	
Service taken / handover		Completed	
Final invoice		Posted	
Customer payment		Posted if tested	

6. Service Menu And Navigation Smoke Test

Step	Action	Expected result
1	Open Service -> Command Center	Metrics/cards load without server error
2	Open Service -> Dispatch Board	Job lanes load
3	Open Service -> Technician Workbench	Technician daily work page loads
4	Open Service -> Equipment Units	Equipment list loads before create form
5	Open Service -> Jobs	Job list loads before create form
6	Open Service -> Job Sheets / Work Orders	Work order list loads
7	Open Service -> Material Requisitions	MRN list loads
8	Open Service -> Petty Cash or expense claims page	Service expense list loads
9	Open Service -> Service Taken	Handover list loads

Step	Action	Expected result
10	Open Service -> Help	Full rendered help page opens, not raw markdown

UI rule:

Check	Expected result
First screen view	Primary list/status appears first
Create buttons	Open modal dialogs or clear on-demand forms
Edit buttons	Open modal dialogs where the feature has been converted to the modal pattern
Long forms	Do not push important existing records below the first view

7. Equipment Unit Test

Create one equipment unit before opening the job.

Field	Input
Mode	Existing item
Equipment item	Use a generator/machine item, or create EQP-GEN if required
Serial number	GEN-SVC-001
Customer	CUS-SVC-001
Site/location	Customer workshop
Warranty coverage	Labour and parts if available

Expected:

Check	Where	Expected result
Save	Equipment unit page	Equipment saves successfully
List	Equipment unit list	GEN-SVC-001 appears
Customer link	Equipment detail/list	Customer is CUS-SVC-001

Check	Where	Expected result
Warranty/contract fields	Equipment detail	Coverage data is visible if entered
Edit	Equipment row/detail	Editable fields save and remain after refresh

Negative tests:

Test	Expected result
Duplicate serial number	Clear duplicate validation
Missing customer	Required validation if customer is mandatory
Inactive item/customer	Cannot use, or clear warning appears

8. Create Job Order

Open Service -> Jobs .

Step	Action	Expected result
1	Click + New Job Order	Create modal opens in front of the list
2	Select equipment unit GEN-SVC-001	Customer defaults or validates to CUS-SVC-001
3	Enter job type Repair	Accepted
4	Enter customer requirement Generator does not start	Accepted
5	Enter job description Repair and test generator starting system	Accepted
6	Enter intake note Starter control suspected	Accepted
7	Save	Modal closes or confirms success; job row appears

Expected:

Check	Where	Expected result
Job list	Service -> Jobs	New job appears without needing browser reload

Check	Where	Expected result
Job status	List/detail	Open or correct initial status
Job number	List/detail	Generated job number appears
View	Job number/View action	Opens job detail
Edit from list	Editable job row	Opens edit modal directly, not forced to detail page first
Header data	Job detail	Equipment, customer, type, requirement, and notes are correct

Negative tests:

Test	Expected result
Save without equipment/customer	Clear required-field validation
Invalid date order	Clear date validation
Edit after job starts	Header editing blocked or limited according to status

9. Job Detail UI And Tab Navigation

Open the created job.

Area	Expected result
Header	Compact header with job number, status, type, equipment, customer, and action buttons
Dates/details	Secondary dates hidden behind Show dates & details
Actions	Start/Complete/Close/Reopen/Refresh Entitlement shown compactly
Tabs	Overview , Plan , Daily Work , Materials , Expenses , Billing , Costs , Files & Notes
Process timeline	Stage cards show status/count metadata
Timeline click	Opens/focuses the relevant tab area

Area	Expected result
Tab URL	Uses tab query and #tab-content anchor
First view	Current tab content is visible without a long scroll through unrelated forms

Test each tab:

Tab	Expected result
Overview	Cockpit and process timeline visible
Plan	Operation table visible; add action available
Daily Work	Daily sheet list/empty state visible first
Materials	Issued MRNs/return/damage areas visible
Expenses	IOU, petty cash, out-of-pocket workflows separated
Billing	Closeout readiness, entitlement, quotation/invoice trail
Costs	Cost summary and sources
Files & Notes	Comments and attachments

10. Start Job

Step	Action	Expected result
1	Click start	Confirmation/action succeeds
2	Refresh page	Status remains In Progress
3	Try to edit protected header fields	Blocked or disabled according to workflow

Expected:

Check	Expected result
Job status	In Progress
Command center	Job appears in active jobs
Dispatch board	Job appears in active/assigned or correct lane

Check	Expected result
Technician workbench	Job appears when assigned or daily sheet exists

11. Plan Operations / Sub-Parts

Open Plan .

Create operation:

Field	Input
Step no.	10
Work step / subassembly	Diagnose starting system
Required by	Tomorrow
Planned part	SKU-SERIAL
Planned qty	1
Labour hours	2
Description	Check starter control circuit
Notes	Warranty coverage expected

Expected:

Check	Expected result
Operation row	Appears in operations table
Planned stock	Does not reduce inventory
Start operation	Status becomes In Progress
Complete operation later	Status becomes Completed after actual work is recorded
Cost impact	No cost until actual MRN/labour/expense is posted or approved

Negative tests:

Test	Expected result
Missing work step	Required validation
Negative planned qty/hours	Rejected
Closed job operation update	Blocked

12. Daily Field Sheet

Open Daily Work -> Daily Sheets .

Create daily sheet:

Field	Input
Date/time	Today
Prepared by	Signed-in user or service supervisor
Site/location	Customer workshop
Shift	Day
Site condition	Equipment received at workshop
Planned work	Diagnose generator starting system
Completed work	Initial inspection completed
Pending work	Issue parts and complete repair
Problems found	Control board output weak

Expected:

Check	Where	Expected result
Daily card	Daily Work	New daily sheet appears
Status	Daily card	Draft or correct initial status
Counts	Daily card	Staff/progress/MRN/return/expense/IOU counts start at 0
Quick actions	Daily card	Links for staff, progress, materials, IOU, expense
Refresh	Browser refresh	Daily sheet remains

Check	Where	Expected result
Command center	Command Center	Missing daily sheet count updates correctly

Negative tests:

Test	Expected result
Daily Staff/Labour before selecting sheet	Clean empty-state message, not disabled confusing form
Progress before selecting sheet	Clean empty-state message
Duplicate same-day sheet	Allowed or blocked based on business rule; observed behavior must be documented

13. Daily Staff / Labour

Daily Staff / Labour is the attendance/daily operational record. It does not by itself create invoice labour.

Open Daily Work -> Staff / Labor .

Add daily assignment:

Field	Input
Daily sheet	Daily sheet created above
Technician	TECH1
Manual employee name	Blank when technician is selected
Role	Technician
Assigned task	Diagnose starting system and replace required parts
Normal hours	2
Overtime hours	0
Daily work description	Diagnosis and replacement completed

Expected:

Check	Expected result
Assignment row	Visible in staff/labour register
Daily sheet staff count	Increases
Approval	Assignment can be submitted/approved if workflow requires it
Job cost	Does not create final billable labour unless work-order labour also exists
Audit	Created/approved user and time are traceable where available

Negative tests:

Test	Expected result
No technician and no manual name	Validation
Negative hours	Validation
Closed job	Cannot add labour

14. Daily Progress

Open Daily Work -> Progress .

Add progress update:

Field	Input
Daily sheet	Daily sheet created above
Work completed	Starting system diagnosed and replacement parts installed
Work pending	Final customer confirmation
Problems found	Weak control board output
Additional parts required	None
Additional labour required	None
Customer instructions	Call before delivery
Technician notes	Test run completed
Supervisor notes	Ready for invoice review

Expected:

Check	Expected result
Progress register	New progress row appears
Daily sheet count	Progress count increases
Overview cockpit	Latest progress updates from <code>None</code> to recent progress summary
Command center	Missing progress metric clears for this job/day
Refresh	Progress remains visible

15. Job Sheet / Work Order Labour

Job Sheets / Work Orders Labour is the billable/costed labour source. It is different from Daily Staff / Labour.

Open `Service` -> `Job Sheets / Work Orders` .

Create job sheet/work order linked to the same job.

Field	Input
Service job	Current job
Technician/owner	<code>TECH1</code> or responsible staff
Description	Generator repair labour

Open the work order detail. Start it, then add labour:

Field	Input
Technician	<code>TECH1</code>
Hours worked	<code>2</code>
Cost rate	<code>10.00</code>
Billing rate	<code>25.00</code>
Billable	<code>Yes</code>

Submit and approve the labour entry. Mark the work order done.

Expected:

Check	Where	Expected result
Work order status	Work order detail	Open -> In Progress -> Done
Labour entry status	Labour table	Draft -> Submitted -> Approved
Labour cost	Work order/costs	$2 \times 10 = 20.00$
Billable labour value	Work order/billing	$2 \times 25 = 50.00$
Job Costs tab	Job detail	Approved labour cost appears
Billing/closeout	Job detail	Uninvoiced billable labour is flagged until invoiced or resolved
Daily staff count	Daily sheet	Does not increase because this is work-order labour, not attendance

Negative tests:

Test	Expected result
Approve without submit	Blocked or unavailable
Negative hours/rates	Validation
Closed work order add labour	Blocked
Closed job add work order	Blocked

16. Materials / MRN Issue

Open **Materials** from the job or **Service** -> **Material Requisitions** .

Create MRN from the job **Materials** tab when possible.

Field	Input
Job	Current job

Field	Input
Daily sheet	Daily sheet created above
Warehouse	MAIN

Open MRN detail and add lines:

Item	Qty	Serial	Expected
SKU-CORE	2	blank	Saves
SKU-SERIAL	1	SER-SVC-001	Saves with serial picker

Try an invalid over-request before posting:

Item	Qty	Expected
SKU-CORE	999	Insufficient stock validation

Post the MRN.

Expected:

Check	Where	Expected result
MRN status	MRN detail	Posted
Job Materials tab	Issued MRNs	MRN appears grouped by MRN number
Expanded MRN row	Issued MRNs	Item lines, quantities, daily sheet link visible
Daily sheet count	Daily sheet card	MRN count increases
SKU-CORE stock	Inventory On Hand	$10 - 2 = 8$ before returns
SER-SVC-001	Inventory Availability	No longer available
SER-SVC-002	Inventory Availability	Still available
Material cost	Job Costs	$2 \times 5 + 1 \times 25 = 35.00$

Check	Where	Expected result
Draft MRN closeout	Closeout readiness	Draft MRNs block closeout, posted MRN does not block as draft

Negative tests:

Test	Expected result
Post MRN with no lines	Blocked
Over-request quantity	Blocked
Serial item without serial	Blocked
Duplicate serial on same or another line	Blocked
Issue from inactive warehouse/bin	Blocked or clear validation

17. Material Returns, Damage, And Rejection

Open job Materials tab.

17.1 Return Unused Material To Stock

Create return draft:

Field	Input
Daily sheet	Daily sheet created above
Issued MRN line	SKU-CORE line
Disposition	Not needed - return to stock or equivalent
Quantity	1
Charge to	Company
Condition	Good
Reason	Extra part not used

Expected before posting:

Check	Expected result
Return row	Status Draft
Inventory	SKU-CORE still 8 ; no stock increase while draft
Edit/void	Draft can be edited or voided

Post return draft.

Expected after posting:

Check	Expected result
Return row	Status Posted
Inventory	SKU-CORE becomes 9
Daily sheet count	Return count increases
Closeout readiness	Returned qty counts toward material disposition

17.2 Damage / Non-Returnable Material

Create damage draft:

Field	Input
Daily sheet	Daily sheet created above
Issued MRN line	SKU-SERIAL line
Disposition	Damaged - do not return to usable stock or equivalent
Quantity	1
Serial	SER-SVC-001
Charge to	Warranty OR Company
Reason	Failed during final test

Post damage draft.

Expected:

Check	Expected result
Damage row	Status Posted
Usable stock	SER-SVC-001 does not return to available stock
Cost trail	Damage remains visible in job material disposition
Closeout readiness	Disposition clears for that issued serial/qty

17.3 Rejected / Supplier Return Path

If the system supports a rejected/supplier-return disposition from service material:

Step	Action	Expected result
1	Mark issued material as rejected/supplier-return disposition	Draft saves
2	Post disposition	Stock returns to a returnable/quarantine location according to configuration
3	Create supplier return from procurement if required	Supplier return posts and adjusts supplier/AP credit path
4	Check job	Job still shows rejected material trail

Negative tests:

Test	Expected result
Return more than issued qty	Blocked
Return already disposed qty again	Blocked
Post draft without reason/disposition	Validation
Damaged serial returned to usable stock	Must not happen

18. IOU / Employee Advance

Open job Expenses -> IOU Advances .

Create IOU:

Field	Input
Daily sheet	Daily sheet created above
Requested by	Signed-in system user; should not be free-typed
Amount	20.00
Expected settlement	A future date
Purpose	Travel and parking advance for generator repair

Expected immediately:

Check	Expected result
Success confirmation	Shows IOU number and says request was sent/waiting for finance
Job IOU register	IOU remains visible to requester
Status	Submitted/Pending Approval or configured initial status
Daily sheet count	IOU count increases
Command center	Finance queue includes pending IOU
Date storage	No DateTimeOffset timezone error; API returns success

Finance flow:

Step	Where	Expected result
Approve	Finance -> Petty Cash IOUs	Status moves to Approved
Release	Finance IOU row/detail	Released from selected fund/payment method
Settle	Finance IOU row/detail	Status becomes Settled
Job refresh	Job Expenses tab	Same IOU visible with latest status
Closeout readiness	Billing/Overview	IOU blocker clears only after settled/rejected/cancelled

Accounting/cash checks:

Check	Expected result
Petty cash fund	Balance decreases only when cash is actually released/settled according to implementation
Petty cash ledger	Advance/release/settlement entry visible
Job costs	IOU alone should not be final job cost unless converted/settled through a claim/expense process
Audit	Approver/releaser/settler and timestamps are traceable where available

Negative tests:

Test	Expected result
Zero or negative amount	Blocked
Missing purpose	Validation
Non-system requester typed manually	Not allowed
Settle before approval/release	Blocked
Close job with pending IOU	Blocked

19. Petty Cash Expense Voucher

Open job Expenses -> Petty Cash Expenses .

Create petty cash voucher:

Field	Input
Daily sheet	Daily sheet created above
Funding	Petty Cash
Petty cash fund	WORKSHOP if shown
Claimed by / receiver	TECH1 or selected system user/employee
Expense date	Today
Merchant/vendor	Test Vendor

Field	Input
Bill number	BILL-SVC-001
Payment handover method	Cash handover
Notes	Cash paid for small workshop consumable

Add line if the voucher opens a detail page:

Description	Qty	Unit cost	Billable
Parking fee	1	5.00	Yes

Expected:

Check	Expected result
Voucher creation	Success and generated number shown
Register visibility	Voucher remains visible in job expense register
Bill number	Stored and visible
Handover method	Cash handover/bank deposit/other value visible
Status flow	Draft/submitted/approved/settled according to workflow
Daily sheet count	Expense count increases
Job cost	Settled/approved expense cost appears in Costs tab
Petty cash fund	Balance decreases when settled/paid from fund
Petty cash ledger	Voucher/claim settlement entry visible
Closeout readiness	Expense blocker clears after settled/rejected/cancelled

Repeat handover method variants:

Method	Expected result
Cash handover	Saved and visible
Bank deposit	Saved and visible; bank reference if required
Other	Saved with notes/reference

Negative tests:

Test	Expected result
Missing bill number if required by business rule	Validation
Missing fund for petty-cash-funded settlement	Validation
Settle more than fund balance	Blocked
Closed job add voucher	Blocked

20. Out-Of-Pocket Claim

Open job Expenses -> Out-of-Pocket Claims .

Create claim:

Field	Input
Daily sheet	Daily sheet created above
Funding source	Out of Pocket
Claimed by	TECH1 or system user/employee
Expense date	Today
Merchant/vendor	Test Vendor
Receipt ref	REC-SVC-001
Notes	Employee paid personally

Add line:

Description	Qty	Unit cost	Billable
Parking fee	1	5.00	Yes

Submit, approve, and settle the claim.

Expected:

Check	Expected result
Claim status	Settled
Job expense register	Claim remains visible with status, total, line count
Job cost	5.00 appears in Costs tab
Billable-unconverted count	Shows if billable line has not been converted to quotation/invoice
Finance settlement	Payment type/reference visible
Petty cash fund	Not required unless settled from petty cash
Closeout readiness	Expense blocker clears when settled/rejected/cancelled

Negative tests:

Test	Expected result
Submit claim with no lines	Blocked or clear validation
Approve without submit	Blocked
Settle rejected claim	Blocked
Expense line negative qty/cost	Blocked

21. Accounts And Finance Accuracy Checks

This section confirms that service transactions affect accounts and cash correctly.

21.1 Petty Cash Fund

Open Finance -> Petty Cash .

Check	Expected result
Fund WORKSHOP exists	Active
Opening balance	Visible
IOU release/settlement	Ledger entry visible according to workflow
Petty cash voucher settlement	Ledger entry visible

Check	Expected result
Balance	Opening balance plus top-ups/adjustments minus paid/settled cash items
Overdraw	System blocks payment above available balance, or records clear negative-balance policy if allowed

21.2 Petty Cash IOUs

Open Finance -> Petty Cash IOUs .

Check	Expected result
Job-linked IOU	Visible with job number and requester
Status timeline	Submitted, approved, released, settled/rejected/cancelled visible
Requester	System user/person, not arbitrary free text
Settlement	Requires valid amount/method/reference where configured
Job link	Opens related job or identifies job number

21.3 AR / Customer Account

After final invoice:

Check	Expected result
Sales invoice	Posted invoice visible
AR/customer account	Customer balance increases by invoice amount
Payment receipt	Posting payment reduces customer balance
Invoice status	Paid/partially paid according to payment amount
Customer statement/AR aging	Includes invoice until paid

21.4 AP / Supplier Account For Rejected Material

If rejected service material leads to supplier return:

Check	Expected result
Supplier return	Posted
Supplier/AP credit	Supplier credit/AP adjustment created according to system terminology
Inventory	Supplier return removes returned stock from warehouse/quarantine
Job	Rejected material remains traceable to the job

21.5 Chart Of Accounts / Ledger Sanity

Where ledger pages expose the detail, verify:

Transaction	Expected account direction
Posted service invoice	AR debit / revenue credit according to accounting setup
Customer payment	Cash/bank debit / AR credit
Petty cash top-up	Petty cash debit / source cash-bank credit
Petty cash voucher settlement	Expense or clearing debit / petty cash credit
IOU advance	Employee advance/IOU clearing and petty cash movement according to configured workflow
Supplier return	AP/credit note and inventory/return accounting according to configured workflow

If the UI does not expose journal entries, verify through AR/AP, petty cash ledger, invoice status, and reporting totals.

22. Quotation / Estimate

Open Service -> Quotations .

Create quotation linked to current job.

Kind	Item	Description	Qty	Unit price	Tax
Part	SKU-CORE	Filter replacement	1	7.00	ZERO

Kind	Item	Description	Qty	Unit price	Tax
Labour	LAB-SVC	Diagnosis labour	2	25.00	ZERO
Expense	blank or expense item	Parking fee	1	5.00	ZERO

Expected:

Check	Expected result
Quotation total	7 + 50 + 5 = 62.00 before discount/entitlement
Entitlement	Covered warranty/contract lines show correct zero/discount behavior if applicable
Status flow	Draft -> Sent -> Customer Approved
Change order	Approved quote supports change order/revision
Job Billing tab	Quote appears in quotation trail

Negative tests:

Test	Expected result
Approve unsent quote if not allowed	Blocked
Edit approved quote directly	Blocked; change order required
Invalid qty/rate	Validation

23. Service Taken / Handover

Open Service -> Service Taken .

Create handover for current job.

Field	Input
Service job	Current job
Items returned	Generator returned after repair
Customer acknowledgement	Customer accepted
Notes	Test handover completed

Field	Input
Post-service warranty months	Enter if applicable

Expected:

Check	Expected result
Handover	Created and linked to job
Status flow	Draft -> Completed
Job Billing tab	Service taken/handover visible if shown
Files/notes	Handover notes remain traceable

Negative tests:

Test	Expected result
Complete without required acknowledgement	Validation
Create handover for closed/cancelled job	Blocked or clear validation

24. Final Invoice Without Mandatory Estimate

This is a critical service test. Users must be able to create an invoice without an approved estimate when the business process allows direct service/repair billing.

From completed service taken/handover, create final invoice manually.

Invoice header:

Field	Input
Customer	CUS-SVC-001
Service job	Current job
Invoice note	Direct service invoice without estimate

Invoice lines:

Line type	Item/category	Description	Qty	Unit price	Discount	Tax
Labour	LAB-SVC	Diagnosis and repair labour	2	25.00	0	ZERO
Item	SKU-CORE	Part used in repair	1	7.00	0	ZERO
Sundries	SUN-GREASE / SUNDRIES	Grease and lubricants	1	3.00	0	ZERO

Expected:

Check	Expected result
Estimate requirement	Invoice creation succeeds without approved estimate
Labour line	Appears in invoice with work done/description
Item line	Appears correctly
Sundries line	Item belongs to SUNDRIES category
Discount field	Available and applied correctly
Invoice total	$50 + 7 + 3 = 60.00$ before tax
Job Billing tab	Final invoice appears
Job Costs tab	Posted revenue appears
AR	Customer balance increases by invoice total when invoice is posted
Closeout readiness	Final invoice decision clears

Discount variant:

Input	Expected result
Labour discount 10% on 50.00	Labour net becomes 45.00
Total with same item/sundries	$45 + 7 + 3 = 55.00$ before tax

Negative tests:

Test	Expected result
Invoice with no lines	Blocked

Test	Expected result
Negative qty/price	Blocked
Sundries item not in SUNDRIES category	Tester records whether system allows it; business should prefer category validation
Invoicing closed/cancelled job	Blocked unless reopen/authorized path exists

25. Estimate-Based Invoice Path

If quotation was approved in section 22, test estimate-based conversion too.

Step	Action	Expected result
1	Open completed service taken	Conversion mode allows approved estimate
2	Select approved quote	Quote lines load
3	Convert to invoice	Invoice is created
4	Open invoice	Lines match approved quotation or allowed conversion rules
5	Open job Billing tab	Quote and invoice both visible

Expected:

Check	Expected result
Estimate conversion	Still works after direct invoice capability exists
Duplicate billing	System warns/blocks if same approved labour/parts would be billed twice
Revenue	Costs tab shows posted invoice revenue

26. Customer Payment And AR

Open Finance -> Payments or payment receipt workflow.

Create customer payment for final invoice.

Field	Input
Customer	CUS-SVC-001
Invoice	Final invoice
Payment method	Cash or Bank Transfer
Amount	Full invoice total
Reference	PAY-SVC-001

Expected:

Check	Expected result
Payment status	Posted
Invoice status	Paid
AR/customer balance	Reduced by payment amount
AR aging	Invoice removed from open aging or shown as paid
Cash/bank report	Payment appears according to payment method

Partial payment test:

Input	Expected result
Pay half of invoice	Invoice becomes partial/open with remaining balance

27. Customer Return / Credit After Service Invoice

Use this if a service invoice item needs customer return or credit adjustment.

Open Sales -> Customer Returns .

Step	Action	Expected result
1	Create return for cus-svc-001 linked to the final invoice if supported	Return draft created
2	Select item line from invoice	Only invoice items are selectable if invoice-linked

Step	Action	Expected result
3	Return qty 1 for SKU-CORE if applicable	Saves
4	Post return	Stock increases and customer credit note/AR credit is created

Expected:

Check	Expected result
Customer return status	Posted
Stock	Returned stocked item increases usable/quarantine stock according to return settings
AR credit	Customer credit note or AR adjustment created
Invoice/customer account	Customer balance reduced by credit
Service job trail	If service-job linkage exists, related credit is traceable; otherwise record as sales return linked to invoice

Negative tests:

Test	Expected result
Return more than invoiced qty	Blocked
Return draft affects stock	Must not happen
Return unposted invoice	Blocked

28. Supplier Return For Rejected Service Material

Use this when a service-issued part is rejected and must go back to supplier.

Open Procurement -> Supplier Returns .

Step	Action	Expected result
1	Create supplier return for SUP-SVC-001	Draft created
2	Add rejected item/qty	Saves if stock exists in returnable location
3	Post supplier return	Stock decreases from returnable location
4	Check AP	Supplier credit/AP adjustment is created according to system terminology

Expected:

Check	Expected result
Supplier return status	Posted
Inventory	Returned qty leaves warehouse/quarantine
AP/supplier account	Supplier credit note or AP adjustment visible
Service job material trail	Original service material rejection remains visible

29. Closeout Readiness

Open job Billing -> Closeout Readiness .

Before clearing, each blocker must link to the relevant area.

Blocker	How to clear	Expected link behavior
Daily field sheets	Submit/approve or cancel invalid daily sheets	Opens Daily Work daily sheet list
Expense claims	Settle/reject/cancel claims	Opens Expenses or claim list/detail
Petty cash IOUs	Settle/reject/cancel IOUs	Opens Expenses or finance IOU workflow
Draft material requisitions	Post/cancel draft MRNs	Opens Materials/MRN

Blocker	How to clear	Expected link behavior
Technician assignments	Approve/cancel pending assignments	Opens Daily Work Staff/Labour
Labour entries	Submit/approve/cancel entries	Opens work order/labour area
Job sheets/work orders	Complete/cancel work orders	Opens related work order
Material disposition	Dispose return/damage/rejected quantities	Opens Materials disposition tabs
Final invoice decision	Create invoice or mark not billable	Opens Billing invoice area

Expected after all clearing:

Check	Expected result
Closeout readiness	All required checks clear
Job cockpit	No pending closeout blocker
Command center	Job leaves blocker queue
Billing queue	Job appears as ready/cleared or closed path

Negative closeout tests:

Test	Expected result
Close with draft daily sheet	Blocked
Close with pending IOU	Blocked
Close with unsettled claim	Blocked
Close with draft MRN	Blocked
Close with undisposed material qty	Blocked
Close with uninvoiced billable labour	Blocked unless not-billable/resolved
Close without invoice decision	Blocked

30. Complete, Close, Reopen

Step	Action	Expected result
1	Click Complete	Confirmation requires expected text if configured
2	Confirm completion	Job status becomes Completed or equivalent
3	Click close after readiness clear	Job status becomes closed
4	Try to add material/expense/labour after close	Blocked
5	Reopen as authorized user	Status becomes reopened/active
6	Add a new blocker after reopen if allowed	Closeout readiness recalculates
7	Clear blocker and close again	Close succeeds

Expected:

Check	Expected result
Closed job	Read-only for operational additions
Reopen permission	Restricted to authorized roles
Audit trail	Complete/close/reopen actions are traceable
PDF	Closed job PDF still downloads

31. Files, Notes, And PDF

Open job Files & Notes .

Step	Input	Expected result
Add comment	Customer confirmed generator starts after repair.	Comment appears
Upload file	Any small PDF/image	Attachment row appears

Step	Input	Expected result
Add note	Before/after repair evidence	Notes visible
Download	Click attachment link	File opens/downloads
PDF	Click Download PDF on job	PDF opens with correct job number

Negative tests:

Test	Expected result
Upload oversized file	Clear validation
Upload blocked file type	Clear validation
Comment blank	Blocked or ignored with clear behavior

32. Costing And Profitability

Open job Costs .

Expected values from the base scenario:

Source	Expected calculation
Material issue cost	SKU-CORE 2 x 5 + SKU-SERIAL 1 x 25 = 35.00
Returned material	SKU-CORE 1 returned to stock; issue trail remains visible
Labour cost	2 x 10 = 20.00
Billable labour revenue	2 x 25 = 50.00 before discounts/entitlement
Expense claim cost	5.00 if out-of-pocket claim was settled
Invoice revenue direct path	60.00 before discount/tax in base direct invoice

Check:

Check	Expected result
Material cost	Matches posted MRN source

Check	Expected result
Labour cost	Matches approved work-order labour
Expense cost	Matches settled/approved claims
Invoice revenue	Matches posted final invoice
Uninvoiced billable labour	Clears after invoice/resolution
Margin	Revenue minus actual cost, according to system costing rules
Source drilldown	Cost source tables show MRN, labour, expense, invoice references

33. Reporting Checks

After closeout, check reporting.

Report/page	Expected result
Reporting -> Service KPIs	Job activity included
Reporting -> Costing	Service cost/inventory cost reflected
Inventory -> On Hand	SKU-CORE final qty reflects issue and return
Inventory -> Availability	SER-SVC-001 unavailable if damaged/consumed; SER-SVC-002 available
Finance -> AR	Invoice/payment reflected
Finance -> Petty Cash	IOU/voucher/claim cash movements reflected
Finance -> Petty Cash IOUs	Final IOU status settled/rejected/cancelled

Expected stock from base scenario:

Item	Starting	Issue	Return	Final expected
SKU-CORE	10	-2	+1	9
SKU-SERIAL SER-SVC-001	1	-1	0 usable	Not available
SKU-SERIAL SER-SVC-002	1	0	0	Available

34. Audit And Persistence

Check	Expected result
Logout/login	Job and all linked records still visible
Browser refresh	Current tab records remain
List search	Job, MRN, IOU, claim, invoice can be found
Created user/time	Visible in detail/expanded row/audit where implemented
Edited user/time	Visible where implemented
Status timeline	Key finance/job status transitions visible
Audit logs	Important actions recorded if audit log covers that area

35. Regression Checklist For Modal Dialog Pattern

Use this after UI changes.

Area	Create opens modal	Edit opens modal	Register/list remains primary	Save refreshes list	Cancel does not save
Job order list	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
Job detail edit header	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
Plan operation	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
Daily sheet	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
Daily staff/labour	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
Daily progress	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
IOU advance	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
Petty cash voucher	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail

Area	Create opens modal	Edit opens modal	Register/list remains primary	Save refreshes list	Cancel does not save
Out-of-pocket claim	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
MRN creation	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
Material return	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail
Damage/rejection	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail	Pass/Fail

36. Final Pass Criteria

The Service Job section passes only when all conditions below are true.

Area	Pass condition
UI/navigation	Service pages load, Help is in Service menu, no asset/runtime errors
Equipment	Equipment can be created, linked to customer, and used in job
Job order	Job can be created, started, executed, completed, closed, reopened where authorized
Daily sheets	Daily sheets track staff/progress/MRN/returns/expenses/IOUs
Labour	Daily attendance and billable work-order labour are separate and correct
Materials	MRN stock issue, serial validation, return, damage, rejection handling are accurate
Cash/expenses	IOU, petty cash voucher, out-of-pocket claim remain visible and follow approval/settlement
Accounts	Petty cash, AR, AP/supplier return, invoice, payment effects are accurate
Billing	Manual invoice without approved estimate works; estimate-based invoice still works
Sundries	Grease/lubricants use SUNDRIES item category and can be invoiced
Costs	Costs tab matches MRN, labour, expense, and invoice source documents
Closeout	Job cannot close with unresolved blockers and can close when blockers are clear

Area	Pass condition
Reports	Inventory, finance, service KPI, and costing reports match expected values
Audit	Records persist and remain traceable after refresh/login/logout

37. Tester Sign-Off

Item	Value
Tester name	
Test date	
Environment	Local / Railway / Other
Frontend version/commit	
API version/commit	
Database used	
Main service job number	
Final result	Pass / Fail
Open defects	
Notes
